

SHRIKANT LAMBE

Data & AI Architect | Semantic Layers, Agentic Analytics, Snowflake Cortex

15+ years across Workday, Lyft, and Intuitive Surgical. Previously Manager, BI Analytics at Workday.

San Francisco Bay Area · ShrikantLambe@gmail.com · (314) 775-5528

SUMMARY

Data and AI architect focused on the governed semantic layer that BI tools and AI agents run on. Currently building a Snowflake-native semantic layer over SAP ECC at Intuitive Surgical, covering 8 semantic views across 5 operational domains and supporting 5 production Cortex agents that answer operations questions in natural language. Fifteen years across enterprise SaaS, high-growth marketplace, and regulated medical-device manufacturing, including a Snowflake and dbt platform migration for a multi-billion-dollar GTM organization at Workday. Core strengths are metric governance, dimensional and semantic modeling, batch and streaming pipeline engineering, and grounding LLM output in trusted data.

CORE EXPERTISE

Semantic & Data Modeling: Snowflake semantic views, metric layers and governed metric catalogs, dimensional modeling, dbt, SAP ECC source modeling, data contracts, row-level security

AI & Agentic Systems: Snowflake Cortex (Analyst, Agents, Search), verified query sets, RAG and grounding, LangGraph multi-agent orchestration, Anthropic API and Claude, agent evaluation and guardrails

Data Platform & Engineering: Python, SQL, Airflow, Kafka, Snowflake, dbt, DuckDB, batch and streaming pipeline design, ELT, query performance tuning, data governance and lineage

Deployment & Tooling: GitHub Actions CI, pytest and dbt test suites, FastAPI, serverless deployment (Vercel, Cloud Run), Streamlit, Git-based workflows

Analytics & BI: Sigma, Tableau, self-service enablement, executive reporting, KPI standardization, usage and consumption analysis

Leadership: Led 8 engineers and analysts across 5 pods. Platform roadmap ownership, cross-functional partnership with GTM and C-level stakeholders, hiring and performance development.

PROFESSIONAL EXPERIENCE

Intuitive Surgical

Solutions Architect, Data & AI (Contract)

Sunnyvale, CA

May 2026 - Present

- Architect the Snowflake-native semantic layer and Cortex agent platform for the Manufacturing division, giving operations leaders governed natural-language access to metrics that previously required an analyst and a hand-written SQL query.
- Designed and shipped 8 semantic views across 5 operational domains (Inventory, Manufacturing, Procurement, Order Fulfillment, and Quality) modeled directly on SAP ECC, consolidating metric definitions such as On-Time Delivery that were previously duplicated across stored procedures, database views, and Tableau extracts.
- Built and deployed 5 production Cortex agents on that layer, each grounded in a governed metric catalog and a verified query set so results are reproducible and auditable.
- Analyzed Snowflake query history and Tableau usage to prioritize the metrics and join paths the business relies on, focusing modeling effort on actual consumption patterns.
- Authored the Cortex Analyst contract that now serves Tableau, the agents, and power users from a single governed definition layer.

Workday

Manager, BI Analytics (promoted from Senior BI Analyst)

Pleasanton, CA

Apr 2020 - Apr 2026

- Led Sales and Marketing analytics for a global GTM organization at enterprise scale, owning the analytics platform, executive reporting, and modernization roadmap for revenue operations.
- Managed 8 direct reports across 5 delivery pods, including BI analysts and data engineers, with ownership of hiring, performance development, and delivery standards.
- Architected semantic models on Snowflake so executive dashboards reported consistent numbers across Sales, Marketing, and Finance, resolving recurring metric disputes.
- Migrated the organization from a legacy Tableau estate to Sigma on Snowflake and dbt, standing up a governed self-service platform used directly by global Sales and Marketing stakeholders.
- Cut manual reporting effort by 40% through automation of recurring reports and reusable analytics frameworks.
- Saved Sales Operations more than 20 hours per week by automating forecasting and pipeline review, and improved the accuracy of executive reviews.
- Set standardized KPIs for pipeline health, bookings, customer acquisition, and marketing performance with C-level and GTM leadership.

Lyft

San Francisco, CA

- Built and owned production data pipelines in Python and Airflow, including streaming ingestion from Kafka, delivering the event and marketing data that Growth Analytics ran on in a high-volume marketplace.
- Designed and maintained the data infrastructure behind multi-million-dollar marketing spend across acquisition channels for the Acquisition and Retention teams.
- Modeled campaign attribution, funnel, and churn data used by marketing to reallocate budget on channel performance, and defined the core growth metrics for the team including CAC, ROI, retention, and lifetime value.
- Accelerated experimentation by building reliable pipelines and reusable growth models the analytics team consumed directly, shortening the path from raw event data to decision-ready metrics.

Intuitive Surgical

Sunnyvale, CA

Senior BI / Data Engineer, Supply Chain Analytics

2016 - 2018

- Modernized analytics across Manufacturing, Supply Chain, and Commercial functions in a validated, regulated medical-device environment.
- Replaced manual Excel reporting with production pipelines and governed dashboards, and built KPI frameworks for production efficiency, lead times, defect rates, and capacity planning used in leadership reviews.

Earlier Experience

ServiceNow, Juniper Networks, Tech Mahindra

2006 - 2016

- Lead BI / Tableau Analyst at ServiceNow (2015 to 2016): enterprise dashboards and forecasting across Finance, Sales, HR, and Product during a period of rapid growth.
- Lead BI Developer at Juniper Networks (2014 to 2015): owned reporting strategy through an SAP CRM migration, including cross-team SIT and UAT and user enablement.
- Project Lead at Tech Mahindra (2006 to 2014): enterprise delivery for British Telecom (UK) and AT&T (US), progressing from intern to technical project lead.

AI & AGENTIC SYSTEMS • INDEPENDENT BUILDS

Production-pattern systems built outside of work. Code and write-ups at github.com/ShrikantLambe.

Pipeline Sentinel *LangGraph • Anthropic API • Airflow • Streamlit*

Six-agent self-healing DataOps monitor. Detection agent runs 6 anomaly tools (row-count drift, duration SLA, zombie tasks, schema drift); a blast-radius agent scores downstream impact by BFS over the dependency graph; an escalation gate auto-remediates only when confidence is high and blast radius is low. Pattern memory fast-paths known failures after 3 successful fixes, and a reflection loop retries with a different strategy up to 3 times.

LoanLens *dbt Core • DuckDB • Snowflake • Claude • Streamlit*

Portfolio intelligence stack over 10K synthetic loans and 1.35M payment events. 11 dbt models across staging, intermediate, and mart layers with 65 schema tests, a warehouse-portable design that swaps DuckDB for Snowflake by config, and a Claude layer that emits structured JSON for anomaly detection and investor memos.

Marketing Executive Intelligence Engine *Semantic layer • RAG • LLM generation*

Four-layer architecture that canonicalizes raw marketing metrics against governed business definitions, injects historical context by retrieval, detects anomalies and trend breaks, then generates board-ready summaries. Built to keep LLM output deterministic by grounding it in a metric layer rather than raw tables.

HR Analytics Copilot *Next.js • DuckDB-WASM • Claude • text-to-SQL*

Recruiting-funnel dashboard with a dual-path assistant: numeric questions are answered by generated SQL executed in-browser against DuckDB-WASM, returning both the number and the SQL used; interpretive questions are answered from a findings knowledge base with citations. No backend database, and the API key never reaches the client bundle.

Growth Intelligence Agent *LangGraph • FastAPI • FAISS • Vercel*

ReAct revenue-analytics agent with 5 tools spanning warehouse metrics, CRM pipeline, product usage, and a FAISS-backed strategy knowledge base. Answers questions such as “what is driving the EMEA win rate decline” with root cause and recommended actions. Deployed serverless with a live demo.

Also: Marginalia (semantic reading library on Supabase pgvector and Gemini, with embedding-based auto-routing and grounded in-article chat) • KinSync (family logistics agent on Google ADK, Vertex AI Reasoning Engine, and A2UI) • Coffee Barista Agent (Google ADK RAG demo on Cloud Run) • Customer Churn Analysis (ML pipeline with SHAP explainability, FastAPI serving, and GitHub Actions CI).

EDUCATION & CERTIFICATIONS

M.S., Software & Telecommunication Engineering, BITS Pilani, India

B.E., Computer Science, University of Mumbai, India

AI-Driven Leadership, Stanford University
